

Look closely at the door-locking system

Conventional door-locking systems send a steel bolt through a small hole in wooden doorjamb only 1/2" from the edge of the jamb. Without effective reinforcement, all that an intruder needs to break to enter a home is that 1/2" of soft wood.

BY ADDING THE  
**KIKGARD™**  
**Shield**

**You Put Steel into Steel...a Much Wiser Choice!**

Unlike flat plates and single-flange products that depend only on screws for strength, the KIKGARD double-flange design will not yield, but turns wooden doors into steel at the weakest point.

Doorjamb reinforcement is an **essential part** of every door-locking system and **should come standard** with every exterior door...just as do the hinges, etc.

**KIKGARD**

**The part that's missing from your door lock!**

# You Need The **KIKGARD™**

THE PART THAT'S MISSING FROM YOUR DOOR LOCK!™

## Doorjamb Reinforcement

Increases the strength of your home's door-locking systems so much it can **virtually eliminate** forced entry!

## Builders have always known

**...what breaks in forced entry is the doorjamb, not the door or the lock.**

In some homes, the 3-part door locking systems are not equal in strength. There is a beautiful door and shiny new lock...but the weak unreinforced jamb can be entered with one swift kick.

Some home builders ignore doorjamb reinforcement altogether or provide only weak, ineffective devices they call reinforcement...knowing they will fail.

### Quality Builders Provide Quality Products:

Your buyer is finally going to get the dream home they've always wanted. To do everything possible to insure their safety, they will inquire about a Home Security Package with you, their builder. When you explain that the KIKGARD Shield comes on all exterior doors, they can have peace of mind, knowing you have done everything possible to make sure their doors can be securely locked to protect what they value most – their home and family!

**Whether you are building new homes or apartments, remodeling, repairing broken doorjamb, or want to greatly reduce construction break-ins – installing the patented KIKGARD Shield doorjamb reinforcement insures you are providing the very best.**

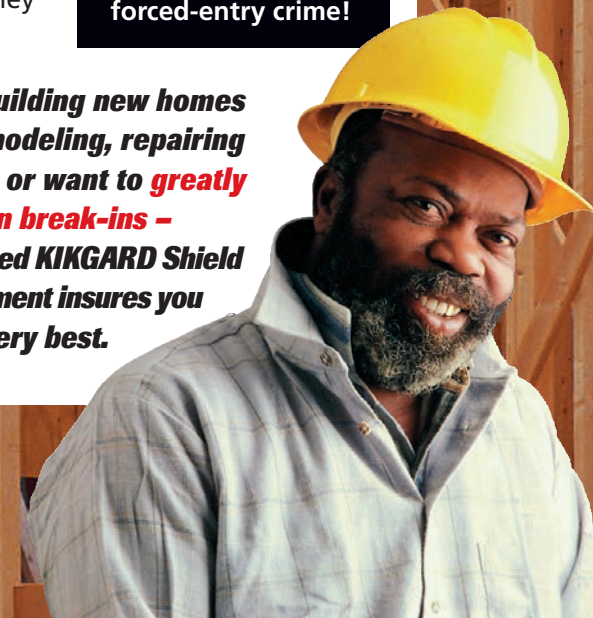

Loss of property annually in non-injury break-ins is in excess of \$3.1 billion dollars.

A forced entry occurs somewhere in America every 13 seconds.

Over 80% of all intruders gain access through an entry door.

Without effective doorjamb reinforcement, one kick is all it takes.

Building homes complete with effective doorjamb reinforcement can make a drastic reduction in forced-entry crime!

**THE PART**

**PROTECT** what buyers Value Most...  
with the **KIKGARD™ Shield.**

# That's Missing from Your Door Lock!

**KIKGARD™  
Shield**

*So Unique...*

...it received a

United States

Patent.

*So Effective...*

...it can virtually

eliminate forced

entry through

any door-locking

system to which

it is applied.

## QUALITY CONSTRUCTION DEMANDS QUALITY PRODUCTS

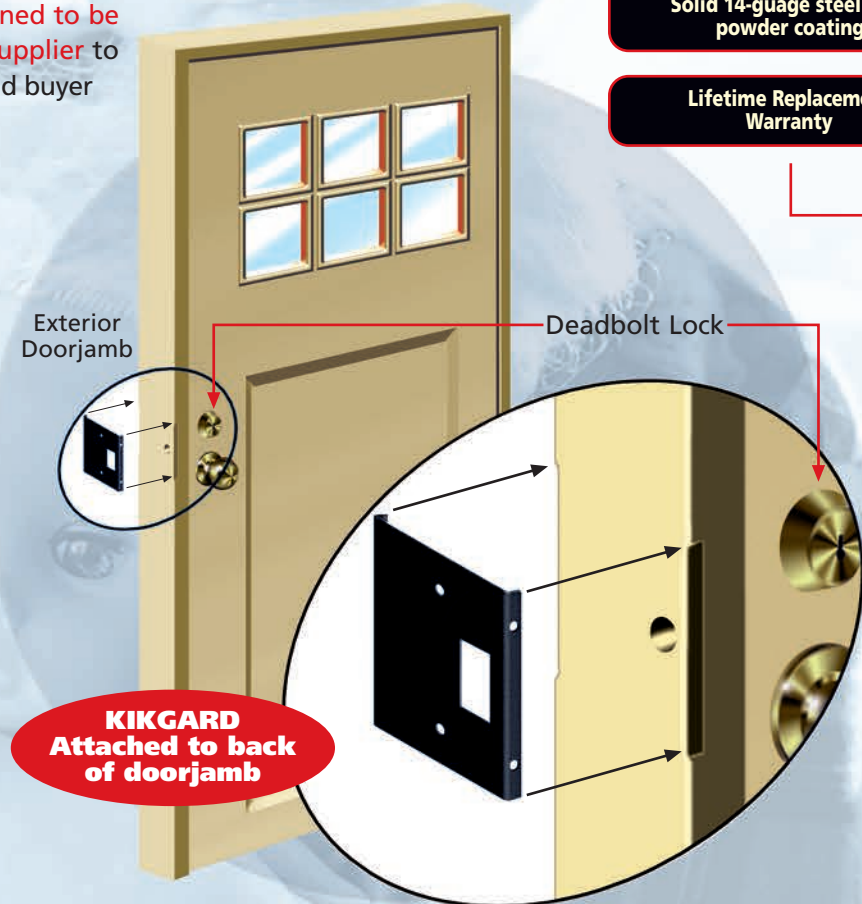

*Seeing what did NOT work*, we designed and patented a custom-made, U-shaped, solid steel Shield to solve the problem. Purposely created as a one-piece steel unit, the KIKGARD™ is **designed to be installed at the door supplier** to eliminate all builder and buyer installation costs.

With the KIKGARD™ as your *Shield*, no force is applied against screws. If force is applied to enter, the solid steel, U-shaped *Shield* does not bend but firmly holds the entire width of the doorjamb wood between the two steel flanges, making forced entry into your buyers' home *virtually impossible!*

### Quality does not have to mean a high price tag.

Providing this feature is so inexpensive that door suppliers can no longer justify the use of worthless "Band Aids" offered in the past.

If doorjamb reinforcement is not a standard part of your door-locking systems, it's important to **at least offer it to your buyers before they move into their new home.**

**KIKGARD Attached to back of doorjamb**

For exterior doors, doors with glass inserts, & double door headers

Can be retrofitted for existing homes

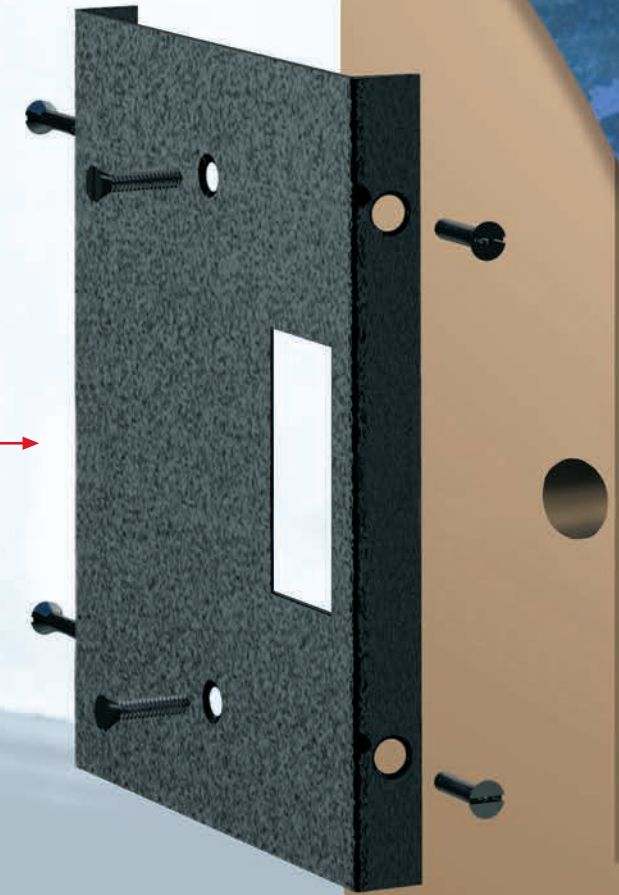

Totally invisible once installed & trim applied

Solid 14-gauge steel with powder coating

Lifetime Replacement Warranty

**In today's America, what better feature could you possibly provide buyers than to permanently increase the safety of their homes?**

**100% installed at the door supplier.**
